# Motores Dynamixel

# Motores Dynamixel

# Piezas Bioloid

# Piezas Bioloid

```
from dxl.dxlchain import DxlChain

def set_vel(chain,id,value):
    val = value
    if (value < 0):
        val = (value*-1) + 1023
    chain.set_reg(id,"moving_speed",val)

# Open the serial device
chain=DxlChain("/dev/ttyUSB0",rate=1000000)

# Load all the motors and obtain the list of IDs
motors=chain.get_motor_list()
print motors
```

```
# Move a bit
id = motors[0]
chain.goto(id,500,speed=200) # Motor ID 1 is sent
to position 500 with high speed

chain.goto(id,100) # Motor ID 1 is sent
to position 100 with la$

# Move and print current position of all motors while
moving
chain.goto(id,1000,speed=20,blocking=False)
# Motor ID 1 is sent to position 1000
while chain.is_moving():
    print chain.get_position()

# Disable the motors
chain.disable()
```

# HumaRobotics Dynamixel Library

- Clonar el repositorio:
  - [https://github.com/HumaRobotics/dynamixel\\_hr.git](https://github.com/HumaRobotics/dynamixel_hr.git)
- Correr los siguientes comandos:
  - `sudo apt-get install python-serial`
  - `sudo usermod -a -G dialout debian`
  - `sudo python setup.py install`

# Ejercicio

- Mover el motor a la posición 300 a alta velocidad
- Chequear cuáles son los registros del motor
- Cambiar el motor para que se mueva en rotación continua
- Chequear los límites de velocidad
- Obtener la temperatura del motor
- Prender el led del motor

# Preguntas
