```

**Problema 2**

- a) La inecuación que debe cumplirse para no tener que insertar Twait es:

$$t_{51-Z80\max} + t_{16-CTC\max} < 1,5T - t_{15-Z80\min}$$

Debe cumplirse además:

$$T - t_{19-Z80\max} > t_{14-CTC\min}$$

El Z80 CMOS mas rápido que la verifica es el Z84C0006, pues:

$$70ns + 110ns < 1.5 (162ns) - 30ns$$

$$180ns < 233ns$$

$$162ns - xxx > 70ns$$

- b) i. Se conecta el puerto A del PIO 1 a pos [8], ARDY a *listo* y *fin* a ASTB, del mismo puerto. s0 y s1 a D0 y D1 del puerto B del PIO 1.
